

Management of a suspected case of 2019-nCoV acute respiratory disease

Does the patient have **EITHER**:

- severe acute respiratory infection requiring admission to hospital with clinical or radiological evidence of pneumonia or acute respiratory distress syndrome **OR**
- acute respiratory infection of any degree of severity, including at least one of shortness of breath or cough (with or without fever) **OR**
- fever with no other symptoms

Primary care

- isolate the patient (and their belongings or waste) in a side room with the door closed
- do not physically examine the patient
- if consultation/examination had already started, leave the room and wash your hands
- ask the patient to call NHS 111 from their room, on their mobile (use GP surgery landline if mobile unavailable)

Secondary care

- place the patient in respiratory isolation, and PPE is worn by any person entering the room
- seek specialist advice from a local microbiologist, virologist, or infectious diseases physician

Patient phone call

- NHS 111 to advise the patient to stay at home whilst appropriate transport can be arranged

Notify the local PHE Health Protection Team **only if positive***

Consider self isolation at home for patients who are clinically stable if safe transport home can be arranged

YES

NO

Has the patient lived in or travelled to China, Hong Kong, Japan, Macau, Malaysia, Republic of Korea, Singapore, Taiwan or Thailand in the 14 days before onset of illness?

Anyone who has had contact with a confirmed case of 2019-nCoV in the last 14 days should be reported to the local Health Protection Team immediately*

YES

NO

Have they had contact with a confirmed case of 2019-nCoV in the 14 days before onset of illness?
